Hello, I am known by Muhammad Talha Khalid. I'm a software engineer with experience in c#, c++ and python. During my academia, I created a few websites in asp.net that created my passion for websites. Right Now I am learning hard to be a full-stack engineer with gaining experience in Express JS, Node JS, MongoDB and React

My dream is to one day start my own business and become an entrepreneur. I have few ideas but as usual, they need financial assistance (working on that)

I'm constantly in quest of learning new things. Currently, those things include gaining more experience with MongoDB, React, Express JS, and Node JS. Along with that, I am looking forward to a master degree in computer science(MSCS), as I enjoyed learning and developing basic projects in machine learning and artificial intelligence

Right now I am working on the React website with all the content coming from the database. I had developed one long time ago with static but responsive content. However, this time I am bringing up games to the next level by making it as dynamic as I can

I had a terrible accident a few months ago that has crushed me to the core both physically and emotionally but as older folk say these hardships are like hard reset to one's life by GOD.
